

FastERP User Guide

Sell, ship, invoice, get paid — and keep balanced books.

Self-contained synthetic demonstration · No Intuit connection

Contents

The guide is organised into six parts. Each part opens with a short divider page, then walks one workflow per screen.

- Part 1 · Getting started**
 - Operations dashboard 5
- Part 2 · Selling — order to cash**
 - Sales orders 7
 - Order-to-cash workflow 8
 - Invoices and receivables 9
- Part 3 · Buying — procure to stock**
 - Suppliers 11
 - Purchase order and goods receipt 12
- Part 4 · Inventory and warehouse**
 - Items and stock 14
 - Warehouse control tower 15
 - Stock by lot and FEFO 16
 - Stock movements 17
 - Cold-chain and temperature 18
 - Storage locations 19
 - Warehouse query lab 20

Part 5 · Accounting

Accounting overview	22
Chart of accounts	23
Record an expense	24
Post a journal entry	25
General ledger	26
Projects and business units	27
Financial reports	28
Accounting setup and attachments	29

Part 6 · Integration

Integration API and Swagger	31
-----------------------------------	----

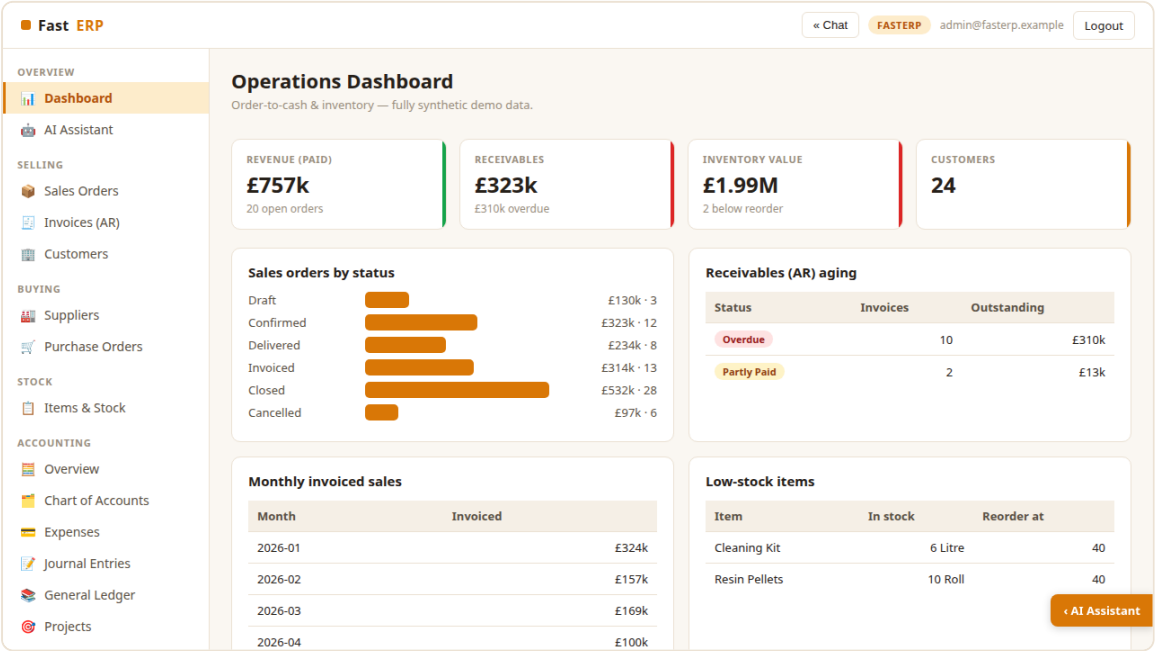

PART 1

| Getting started

Sign in and read the daily cockpit. Every figure on the dashboard is derived from the posted, synthetic transactions you will explore in the rest of the guide.

Operations dashboard

Start at the daily cockpit for paid revenue, receivables, inventory value and open orders. The charts highlight order status, aging debt and low-stock items. Collapse the AI rail whenever you need a wider working area.

PART 2

| Selling — order to cash

Confirm demand, ship it against stock, raise the invoice, and clear the receivable when the customer pays. Each step posts its own balanced entries.

Sales orders

Open **Selling** → **Sales Orders** to filter the order book by status or search for a customer or reference. Each row exposes delivery timing, workflow state and total value.

PART 4

| Inventory and warehouse

The item catalogue holds valuation and reorder policy; the warehouse workspace tracks the physical stock behind it — lots, expiry, locations, cold chain and FEFO allocation — with a guarded query lab for ad-hoc questions.

Items and stock

The stock register shows item codes, groups, selling rates, quantities, values and reorder status. Filter by item group or search the catalog to investigate availability before confirming demand.

AI Assistant

Warehouse control tower

Open **Warehouse** for the physical-stock cockpit: on-hand versus available and held quantities, recent movement volume, lots nearing expiry and any open temperature excursions. It reads tenant-scoped reporting views, so the numbers match what pickers and auditors see.

Stock by lot and FEFO

Every unit of physical stock is a slice keyed by item, warehouse, location, lot and disposition. Batch-tracked items carry a lot code and expiry; allocation follows **FEFO** — first-expiry, first-out — and respects each customer's minimum remaining shelf life before a lot is eligible to ship.

Cold-chain and temperature

Refrigerated zones define an allowed band and a reading cadence. Logged readings outside the band raise an excursion that automatically holds the affected stock from allocation until an authorised release clears it.

Storage locations

Locations model the physical layout — bins, shelves and zones — and control whether stock in them is pickable. Assign a location to a temperature zone to bring its contents under cold-chain monitoring, or transfer slices between locations and warehouses as goods move.

Warehouse query lab

Ask an operational question in plain language, or write SQL directly. The lab generates read-only **SELECT** s over the warehouse reporting views only — a parser rejects writes, joins outside the views and unsafe functions — so analysts can explore stock, movements, lots and temperature without risk to live data.

The screenshot displays the 'Fast ERP' interface, specifically the 'Inventory Query Lab' section. The left sidebar contains a navigation menu with categories: OVERVIEW (Dashboard, AI Assistant), SELLING (Sales Orders, Invoices (AR), Customers), BUYING (Suppliers, Purchase Orders), STOCK (Items & Stock, Inventory Control, Locations), ACCOUNTING (Overview, Chart of Accounts, Expenses, Journal Entries, General Ledger, Projects, Reports, Setup), and the currently selected 'Inventory Query Lab'. The main content area is titled 'Inventory Query Lab' and includes a sub-header 'Ask a question or run read-only SQL on tenant-scoped warehouse views.' Below this, there are three main sections: 1. 'Ask the data' with a text input 'Which lots expire in the next:' and a 'Generate SQL and chart' button. 2. 'SQL' with a text area containing a SQL query: 'SELECT warehouse_code, SUM(on_hand) AS units FROM wms_stock_report GROUP BY warehouse_code ORDER BY units DESC' and a 'Run read-only query' button. 3. 'Executed SQL' showing the same SQL query. At the bottom, there is a 'Chart' section with a y-axis ranging from 20k to 50k and a solid orange rectangular area representing the data. On the right side, there is an 'AI Assistant' panel with a 'New' button, a chat input field with placeholder text 'Ask about sales, receivables or stock—or use /sales /ar /stock /help.', and a 'Send' button. Below the chat input, there are three suggested questions: 'What's outstanding from customers?', 'Which items are low on stock?', and 'How are sales orders tracking?'.

PART 5

| Accounting

Operational events already posted the books. Here you review the results, add manual expenses and journals, and run the statutory reports.

Accounting overview

Open **Accounting → Overview** for cash, receivables, payables and net income. Review the Profit & Loss snapshot, active projects and latest postings, or start a new expense or manual journal.

The screenshot displays the 'Fast ERP' Accounting Overview interface. The top navigation bar includes a 'Chat' button, a 'FASTERP' status indicator, the user email 'admin@fasterp.example', and a 'Logout' button. The left sidebar lists various modules: OVERVIEW (Dashboard, AI Assistant), SELLING (Sales Orders, Invoices (AR), Customers), BUYING (Suppliers, Purchase Orders), STOCK (Items & Stock), and ACCOUNTING (Overview, Chart of Accounts, Expenses, Journal Entries, General Ledger, Projects). The 'Overview' option under ACCOUNTING is currently selected.

The main content area is titled 'Accounting Overview' with the subtitle 'Books, tax and performance across the synthetic business.' It features two buttons: '+ New expense' and '+ Journal entry'. The dashboard is divided into several sections:

- CASH & BANK:** £1.01M (Available book balance)
- RECEIVABLES:** £323k (Customer balances)
- PAYABLES:** £1.01M (Supplier balances)
- NET INCOME:** £387k (€1.08M revenue)

The 'Profit & loss snapshot' section includes a 'Full report →' link and the following data:

Category	Amount
Income	£1.08M
Cost & expenses	£694k
Operating result	£387k

The 'Active projects' section, with an 'All projects →' link, lists three projects:

- Nordic Retail Rollout:** Continental Europe · Budget £180k (Active)
- Warehouse Automation:** UK Operations · Budget £95k (Active)
- Lighting Retrofit:** UK Operations · Budget £72k (Completed)

Below these is the 'North America Launch' project, North America · Budget £240k (Planning).

At the bottom, there is a 'Recent postings' section and a link to 'Open general ledger →'. An 'AI Assistant' button is located in the bottom right corner of the main content area.

Chart of accounts

The 22-account chart groups assets, liabilities, equity, income, cost of sales and operating expenses. Select an account to trace its postings in the General Ledger.

AI Assistant

Projects and business units

Projects combine customer, owning business unit, status, budget, revenue, costs and margin. Dimensioned expenses and journals update project costs immediately without requiring separate ledgers.

PART 6

| Integration

Everything in this guide is available over an HTTP API for downstream systems and migration rehearsals.

Integration API and Swagger

Run `.venv/bin/uvicorn api_app:app --port 5012` and open `http://localhost:5012/docs`.

The read-mostly FastAPI stub documents accounts, invoices, expenses, projects, reports and webhook examples. Invoice POSTs validate previews without posting to the books.
